

7th International SRNWP- Workshop on Nonhydrostatic Modelling

5.-7. Nov. 2007

Bad Orb, Germany

The aim of the workshop is to provide a forum of information concerning all questions related to fine-scale modelling.

The special topic of the workshop will be:

"Quantitative precipitation forecast by high resolution models"

Papers on all aspects of high resolution modelling (1 to 5 km) are welcome, eg. case studies, interpretation, numerical performance at this scale. A problem of particular relevance for forecasts of convection is the assimilation of radar data.

Presentations on other aspects of nonhydrostatic modelling, such as reports on fine-scale modelling systems, numerical aspects, data assimilation, global nonhydrostatic modelling and applications are also welcome.

The workshop will be open to contributors and invited participants.

Contributors are requested to submit an abstract of not more than one page to

M. Baldauf
