

LACE data assimilation working days 2013

work on grid point sigma B (Budapest May 2013)

Florian Meier

Grid point sigma B

ALARO/ALADIN has possibility for grid point dependent sigma B (background error) instead of spectral (space uniform) values

GP sigma B
25.09.2013

(stay of B. Strajnar in MF:

www.rclace.eu/File/Data_Assimilation/2008/report_beni_gpsigma.pdf)

Two error grib files from Global Ensemble (Arpège AEARP) needed : 1x Screening, 1x Minimization

- > Test this Option in AROME;
- > Is there any possibility to generate error files from limited area ensemble (LAEF)?

Grid point sigma B

AROME

25.09.2013

Contact with MF (Loik Berre) Error files every 6h:

Cougar:

~mxpt001/arpege/oper/assim/.../errgrib_scr (Screening)

(U10m, V10m, T2m, RH2m, log p, U, V, T, RH, Q, phi, 27 brightness temperatures, TCWV)

~mxpt001/arpege/oper/assim/.../errgribvor (Minimization)

(3D unbalanced divergence, Q, unb.-T, vorticity and log p)

LSPFCE=.FALSE. In minimization namelist ->/var/suinfce.F90 is called REDNMC_q has to be tuned (because not 0 in Arpège)

Calculation of error files from Arpège ensemble:

arp/var/sujbvarens.F90 has to be adapted to LAM-LAEF

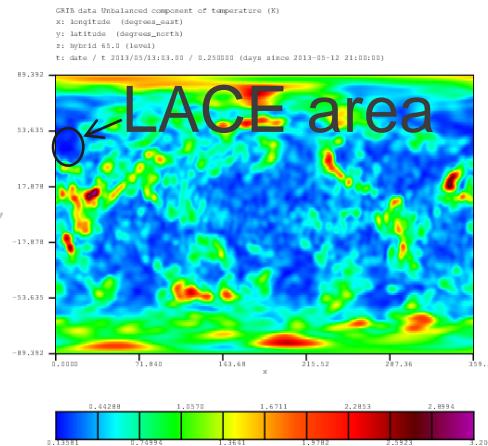

- additional spatial filtering needed to avoid noise in case of small ensemble size (10-15)

- Adaptation for reading LAM errgrib files necessary?

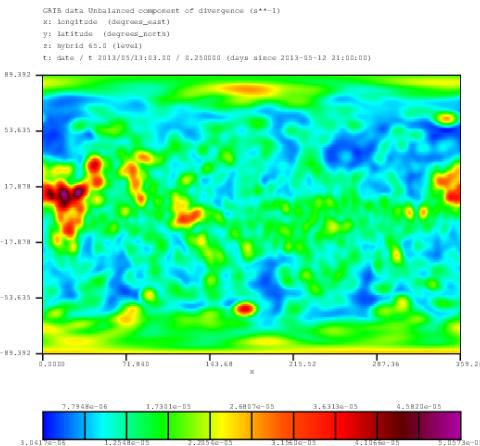

PHD at MF

Errgribvor from 12th May 2013 21 UTC

Grid point sigma B

AROME
25.09.2013

- Grid point sigma B is fine for ALARO/ALADIN, bug for AROME in cy36t1 export (Q is in GP space in AROME NAMGFL and SP in ALADIN/ALARO)
- Most likely the bug is in /arp/var/suinfce.F90->EINV_TRANS or jbtomodel(ad).F90 ->etransinv_jbtomodel(ad) or sqrtb(in/ad/inad).F90
