Implementation and validation of prognostic graupel computation into ALADIN code cy43t2  
**Appendix 1 – verification scores**

Domain of model:

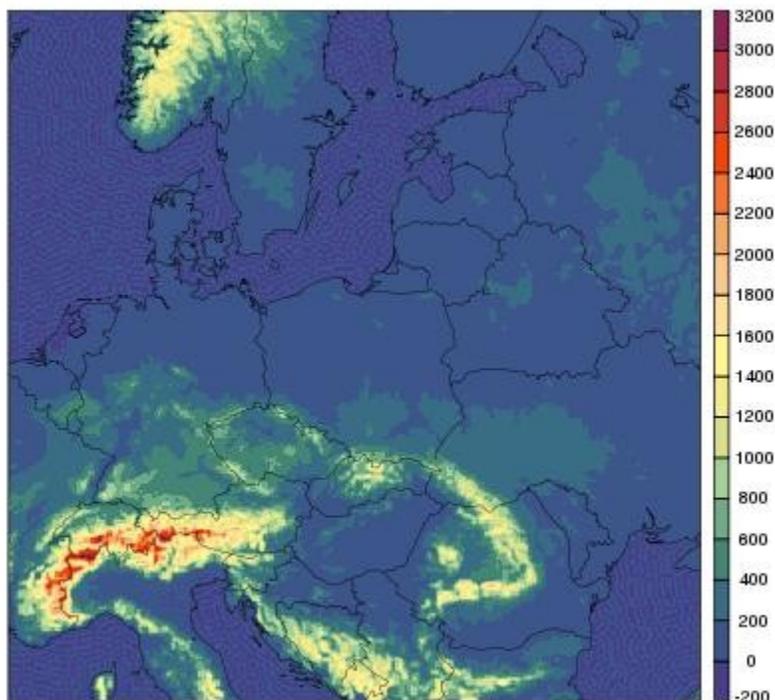

resolution: 7.4 km  
vertical levels: 60 vertical levels  
points: 309x309 (320x320)  
start of forecast: 00 UTC

Observational data:

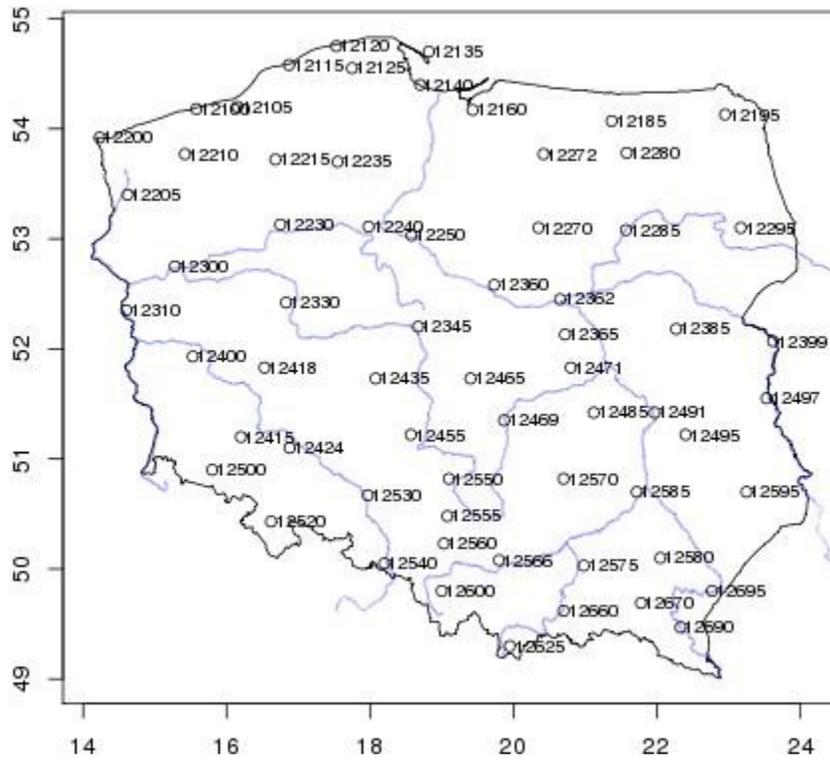

synoptic stations: 61 stations in Poland  
time of experiment: 2013

Verification:

Point to point verification, closest node of model domain for all synoptic stations.

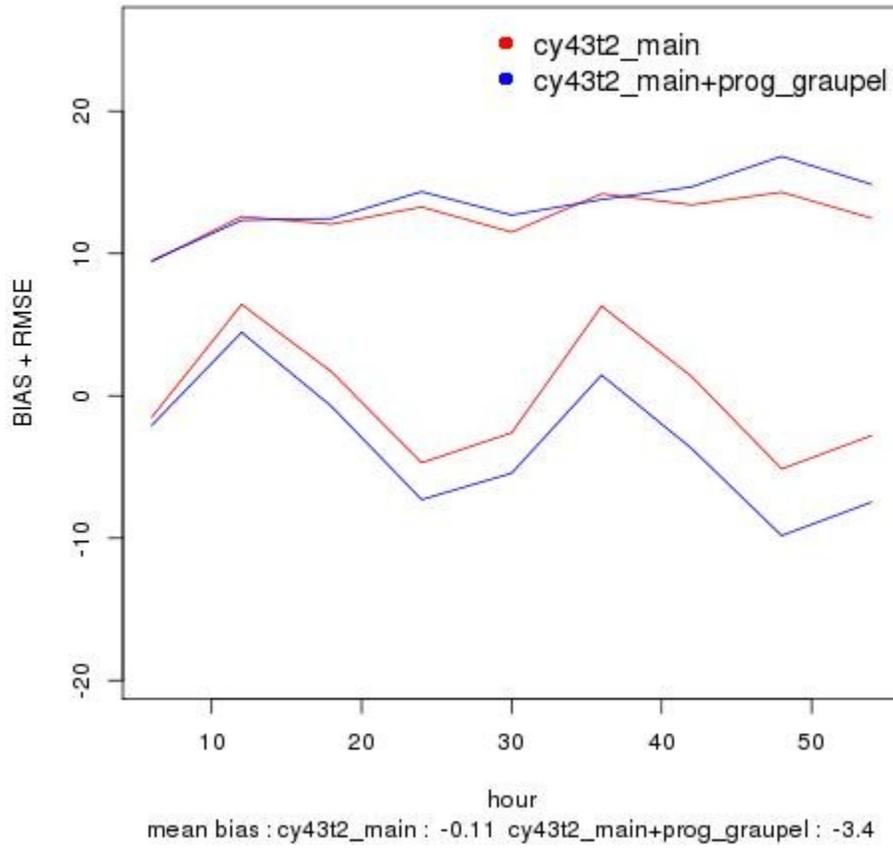

Domain for experiments.
