

LACE data assimilation working days 2013

Status report Austria

Florian Meier, Xin Yan with contributions of
Christoph Wittmann, Florian Weidle and Theresa Gorgas

1. Operational system ALARO+CANARI

- Setup
- Bad forecasts due to CANARI: too cold Tmax/ frozen soil

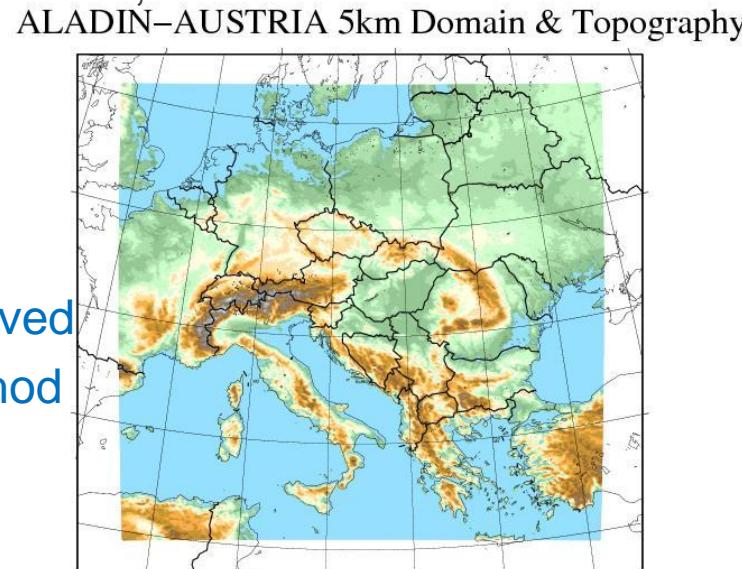

2. AROME-Austria pre-operational and test systems

- Setup
- B-Matrix
- Assimilation of new observations: TLake, Radar, Snow, Pseudo temp, windprofiler,
- Assimilation problem: “Ghost rain”
- IDFI

Operational system: ALARO 4.8km L60 + CANARI

AROME
25.09.2013

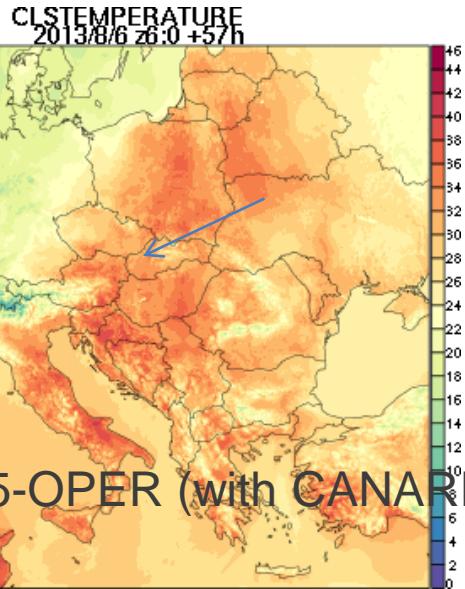

- Moved to new machine SGI ICE-X (001 in 13min)
- ALARO-0 4x/day +72h
- atmosphere from IFS; soil CANARI; SST from IFS
- CANARI settings:
 $\text{OROLIM}=2900, \text{ORODIF}=950., \text{REF_A_H2}=\text{REF_A_T2}=60\text{km},$
 $\text{REF_S_H2}=0.2, \text{REF_S_T2}=3.0, \text{LCORRF}=T; \text{SMU0}=0.$; no vertical correlation function
- Observations T2m/RH2m local+OPLACE
- Coupled with IFS 3 hourly lagged
- cy36t1 export with some modifications
- no major changes planned in DA; forecast files saved for possible B-Matrix calculation NMC-method
- CANARI operational in LAEF since 9th July 2013
(stays of M. Bellus SK)

6th August 2013 06 UTC +57h T2m forecast problem ALARO 4.8km caused by CANARI (observed in Vienna TMAX=39.5°C)

Recent developments in AROME-DA at ZAMG

AROME:

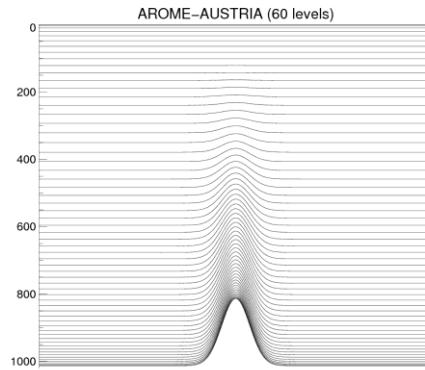

- AROME 2.5km +CANARI +3D-Var in pre-operational mode
- Tests on new observations: GPS (Xin)/windprofiler/lake temperature/radar/pseudo temp assimilation
- Changes due to OPLACE: MSG3/windprofiler/MetOp-B
- Test of AROME on new (bigger domain) with new B-Matrix
- 2x E-Suite: cy37t1op1 physics, small (60L) and big domain (90L)
- Test IDFI in AROME

Tlake assimilation in OIMAIN: 0D-Var

AROME
25.09.2013

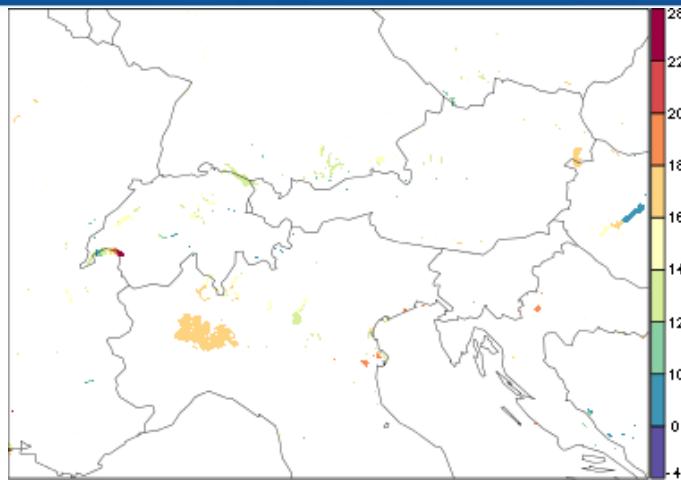

- If available, read ASCII file with box of coordinates, Tlake and estimated Tlake obs error σ_o
- All lake points inside box get new surface temperature Tlake
- $\sigma_b = 2.5\text{K}$ everywhere
- New Routine: `oi_lakeini.f90` called from `oi_main.f90`

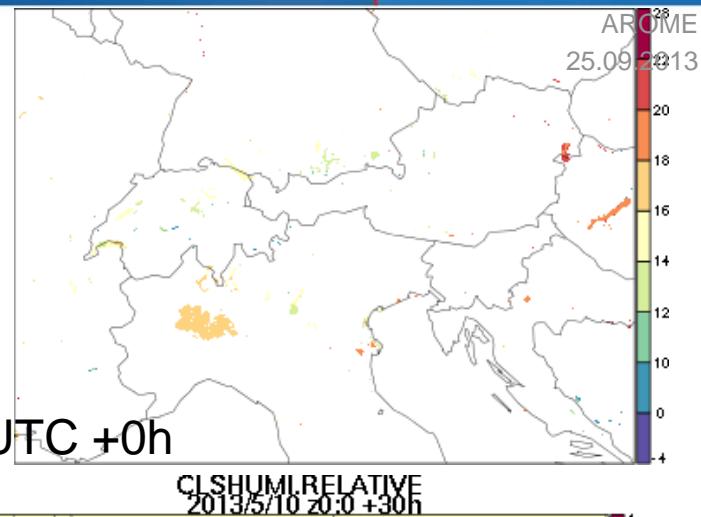

$$T_{\text{lake}} = \frac{T_{\text{Lake}_b} \sigma_o^2 + T_{\text{Lake}_o} \sigma_b^2}{(\sigma_o^2 + \sigma_b^2)}$$

47.4850 47.8110 8.9450 9.7530 24.80 2.00 1 (Lake Constance)

RADAR ASSIMILATION (reflectivity): 12th May 2012 12 UTC

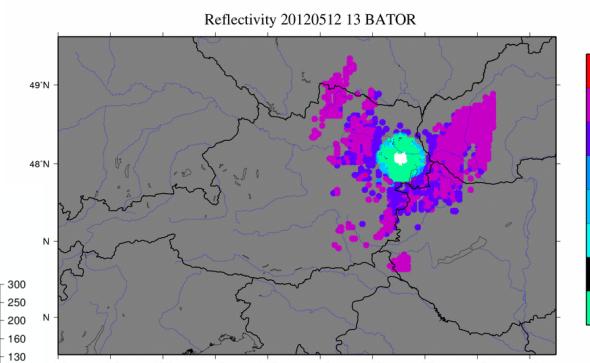

24h-precipitation

24h-precipitation
with RADAR

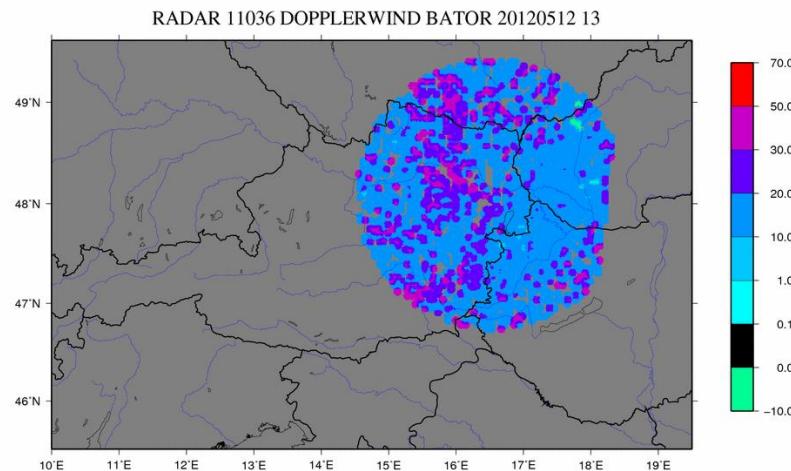

AROME
25.09.2013

Reflectivity in BATOR

Doppler wind assimilation failed so far

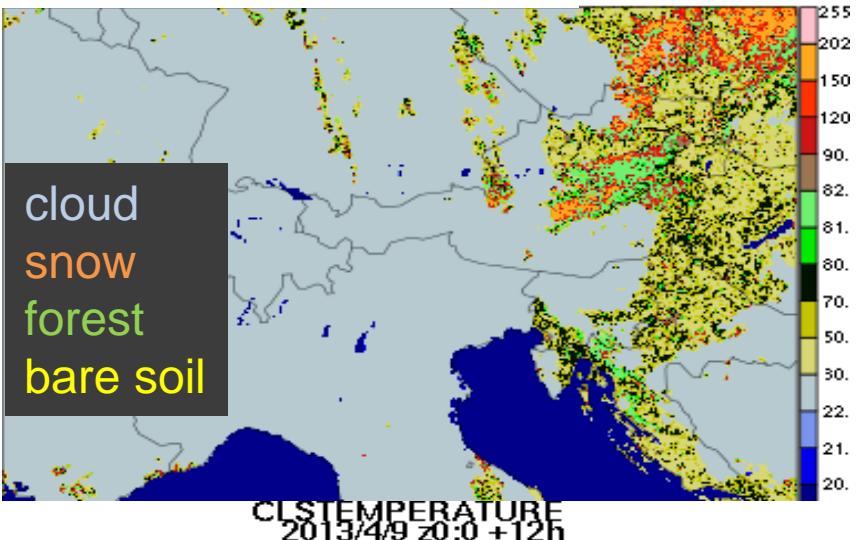

AROME
25.09.2013

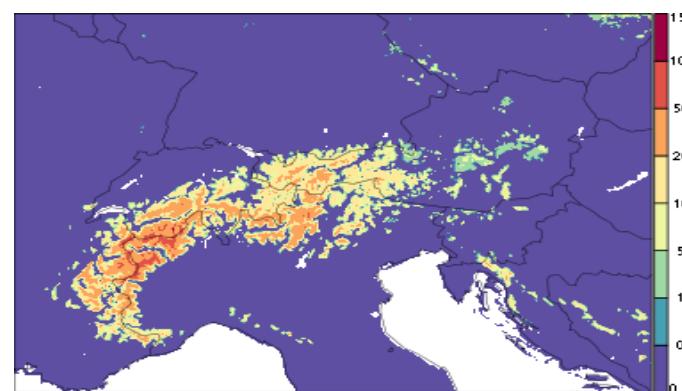

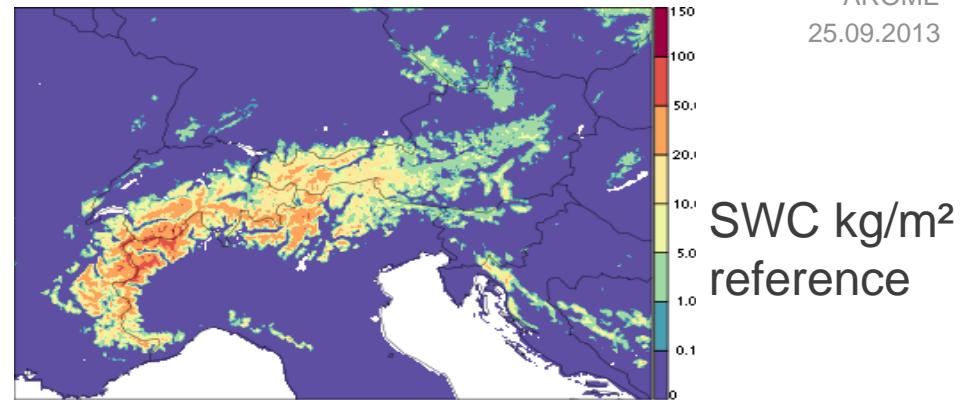

Doppler wind in ODB
all rejected in screening - missing first guess value

Snow initialisation (project: SNOWGRID)

ENVEO-Cryoland
MODIS-snow cover 1km

AROME
25.09.2013

With modified snowcover (OIMAIN)
9th April 2013 00 UTC
In cy37t1op1 also snow assimilation in
CANARI possible

Assimilation of pseudo temp observations

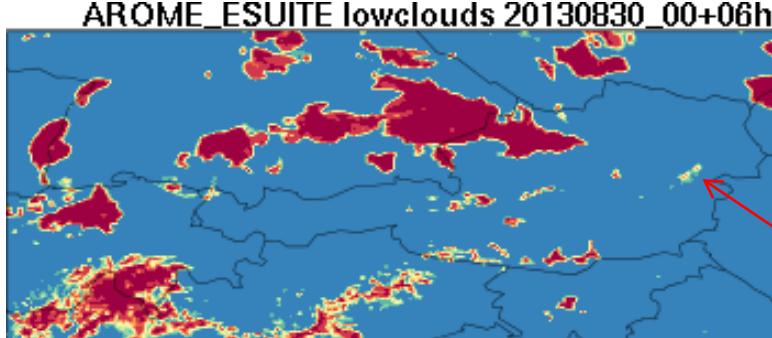

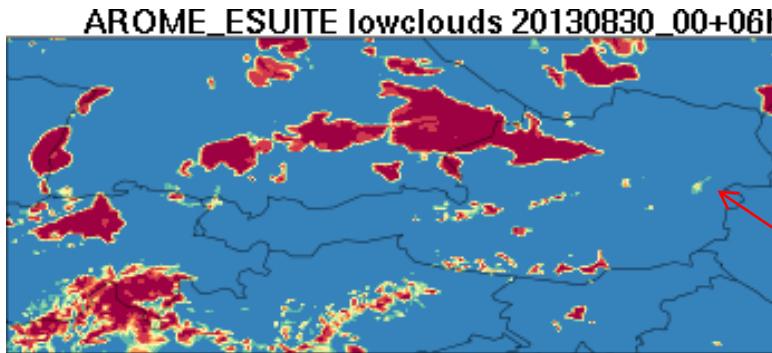

AROME
25.09.2013

- Low clouds (stratus) are often not captured in AROME in Alpine valleys
- Wrong T and Q profiles -> idea: create pseudo radio sounding (obsoul) from several SYNOP (valley floor to mountain tops) and assimilate them
- Innsbruck, Zell am See, Schladming, Mürztal
- Comparison with sounding at Innsbruck looks fine
- Case study: Impact small, differences in physics cy36t1->cy37t1op1 have more impact

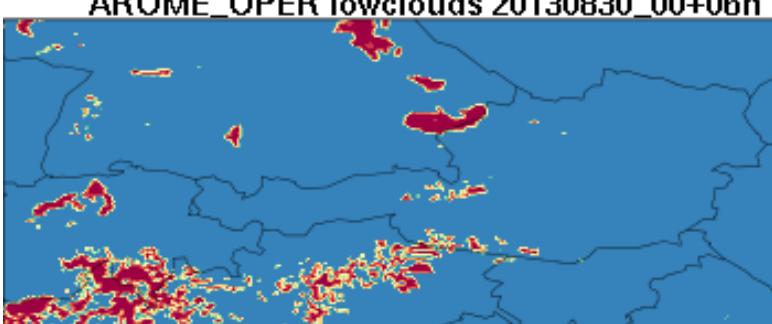

Assimilation of pseudo temp observations

AROME
25.09.2013

low clouds
reference

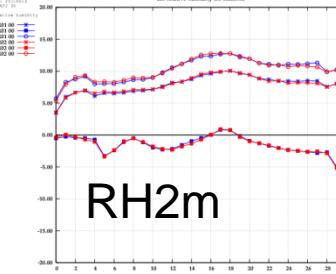

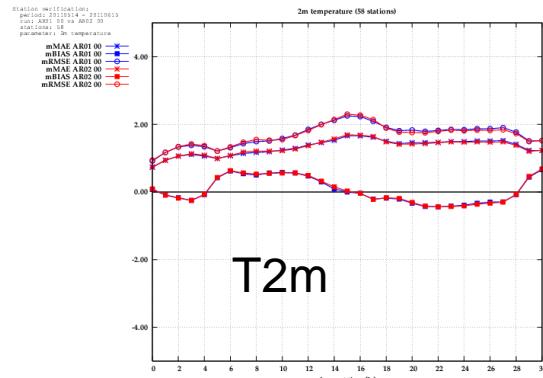

low clouds
With pseudo temps

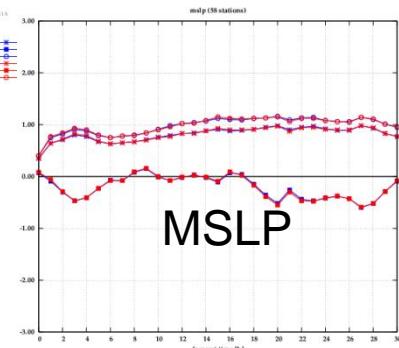

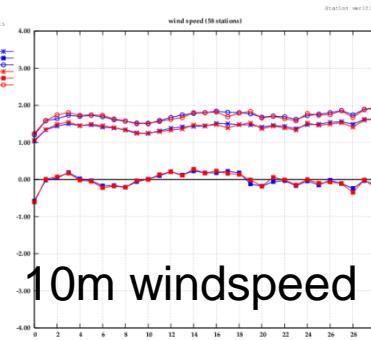

low clouds
cy36t1 instead cy37t1op1

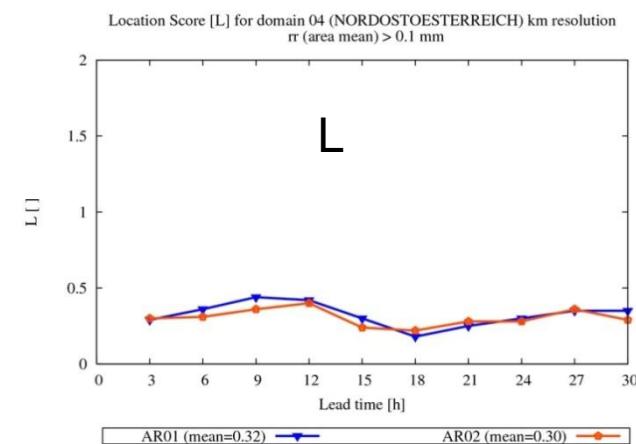

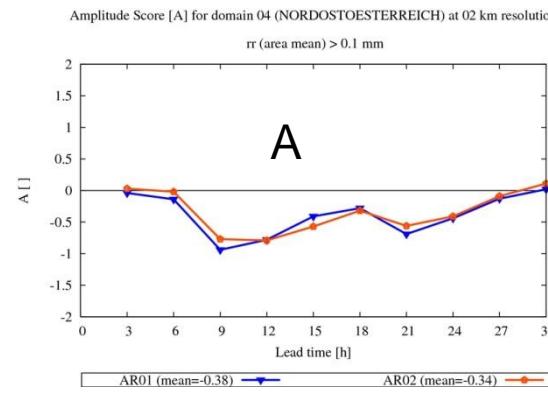

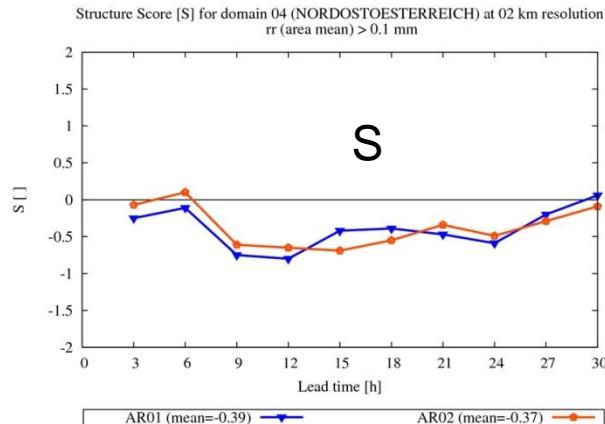

Additional windprofiler from ECMWF (Mars)

More or less neutral impact

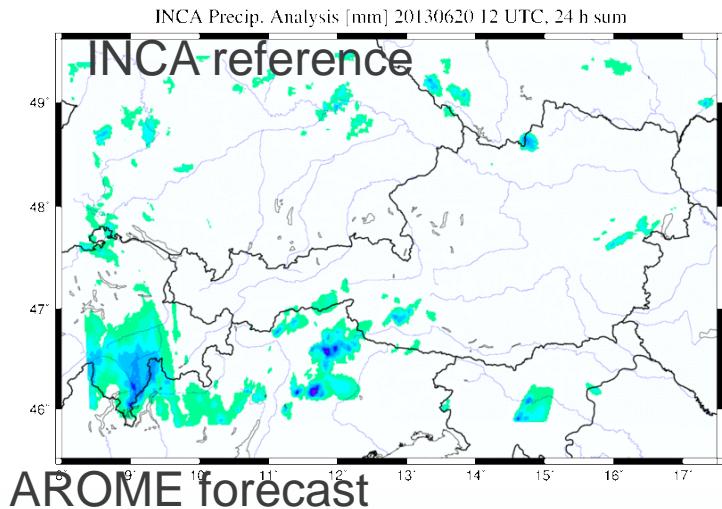

With additional profilers

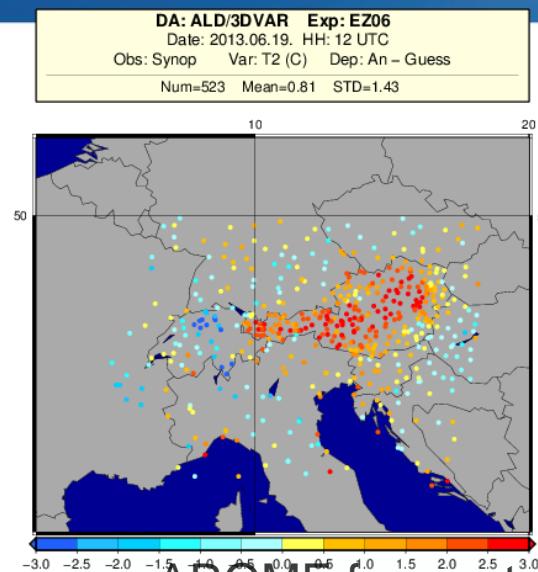

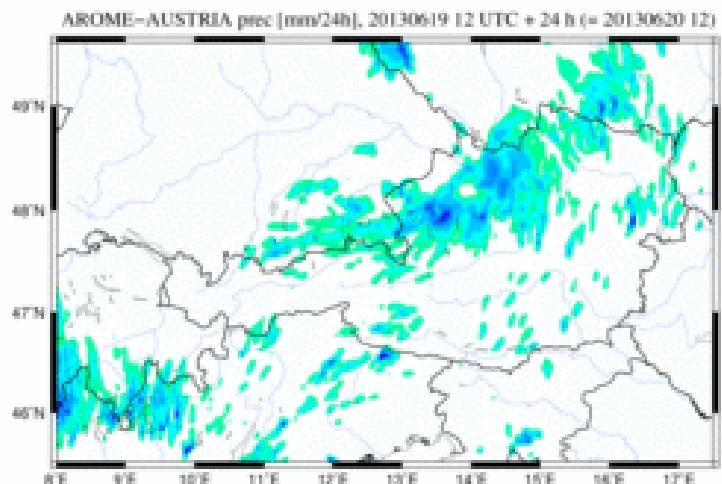

14th May -15th June 2011

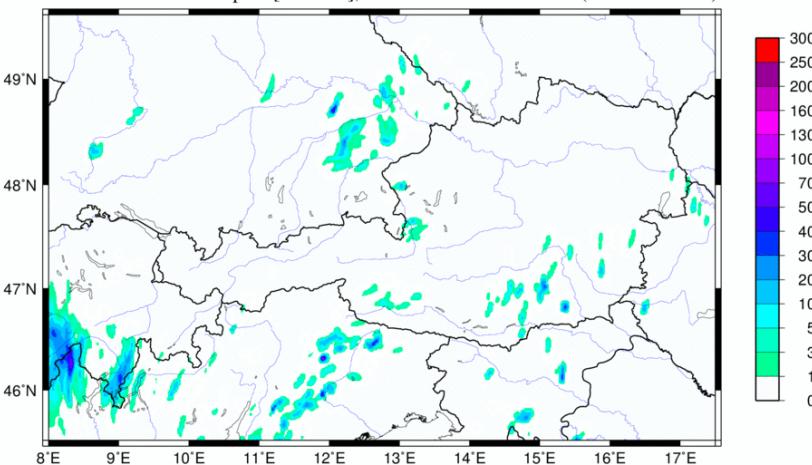

19th June 2013 12 UTC +24h „Ghost rain“

AROME forecast

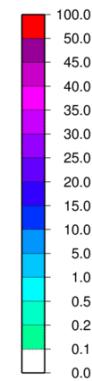

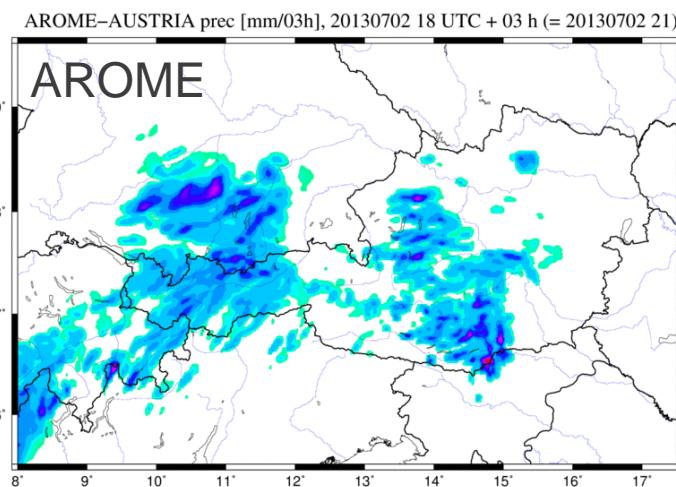

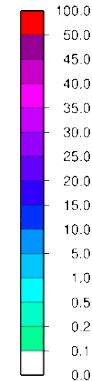

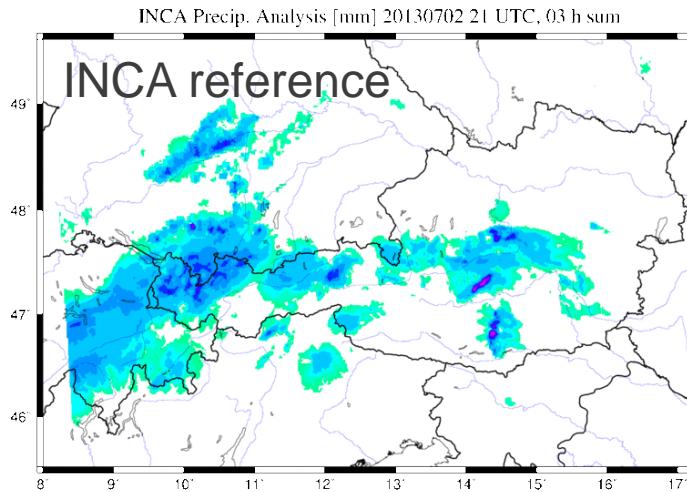

AROME-AUSTRIA prec [mm/24h], 20130619 12 UTC + 24 h (= 20130620 12)

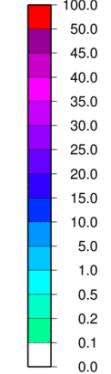

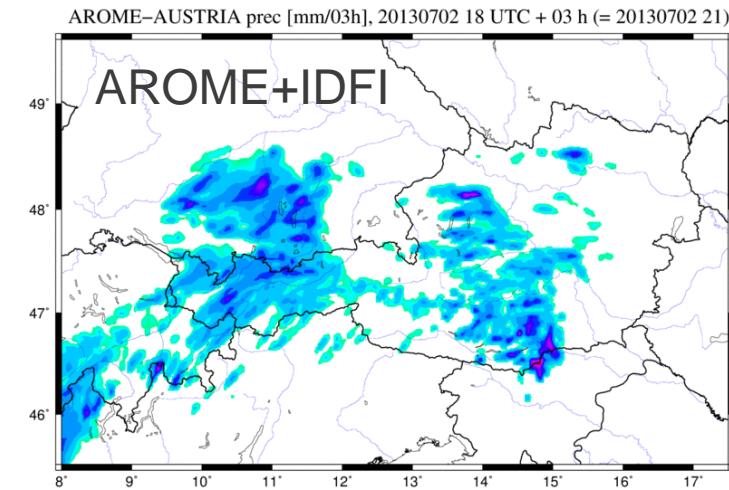

AROME
25.09.2013

AROME +IDFI: precipitation 20130702 18 UTC+3h

AROME
25.09.2013

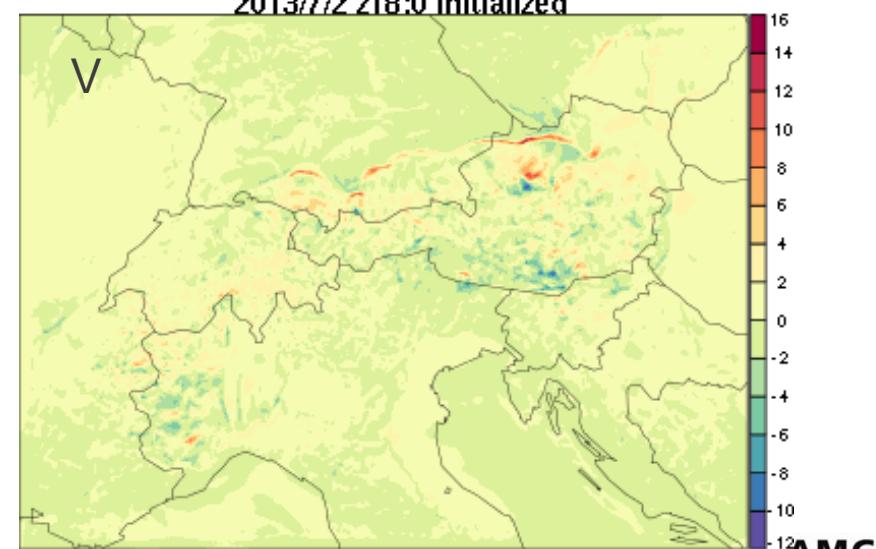

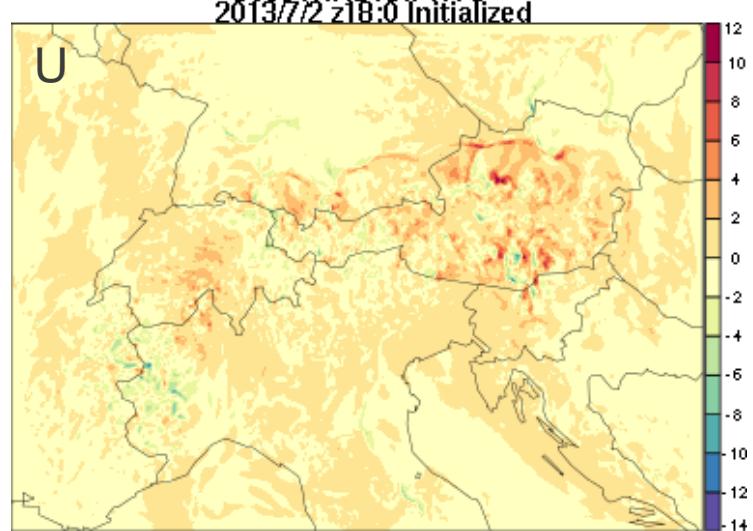

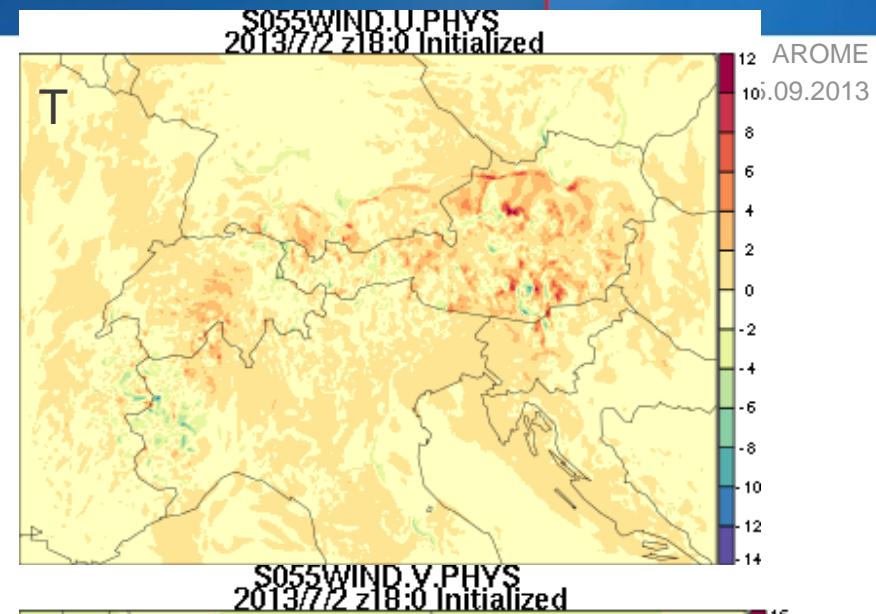

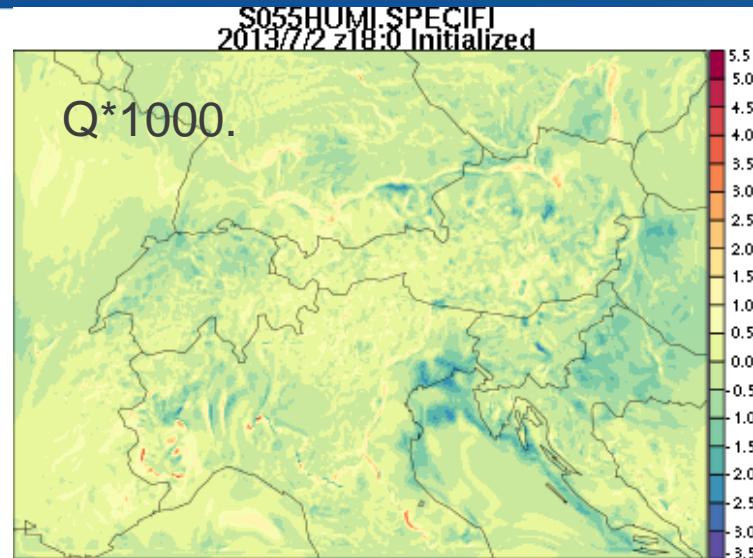

- **Filter first guess: 1x 001**
NAMINI:NEINI=2,LBIAS=.T.,LINCR=.F.;
-> ICMSHAR03BIAS
- **Filter analysis: 1x 001**
NEINI=2,LBIAS=.F.,LINCR=.T.;
- **ANAIDFI=FG+ANAfILTERED-Fgfiltered**
- Works with AROME only with LSPRT bugfix , e.g. cy37t1 and higher

NAMDFI: NEDFI=7,NSTDFI=11,NTPDFI=4, TAUS=5400., LADIFH=.T.

AROME analysis 20130702 18: after – before IDFI (level55)

Future plans on assimilation in AROME-Austria

AROME
25.09.2013

- More tests on radar assimilation (running period)
- Testing IASI in systematic manner (observation impact)
- Testing high resolution satellite winds (MSG)
- Try to get AROME 90L running with satellite data and get it operational
- Tests with AROME 1km
- Further work on GPS / SNOW initialisation
- AROME-EPS
- Comparison: AROME to INCA forecast performance
- More systematic tests on all kind of observations
- Work on background error
- Removal of initial unrealistic precipitation patterns (IDFI?;physics)

- i. AROME Einführung (CW)
- ii. Implementierung an der ZAMG (FM)
 - i. Überblick Modellphysik und –dynamik
 - ii. ZAMG spezifische Entwicklungen (Modellphysik, Assimilation)
- iii. Fallbeispiele (FM)
 - i. Hochwasser 2013
 - ii. Hochreichende Konvektion
 - iii. Föhn
- iv. Zusammenfassung und Ausblick (CW)

Zusammenfassung und Ausblick I

AROME
25.09.2013

- AROME läuft nun im regulären Testbetrieb inklusive Datenassimilation
- Organisation des AROME Systems wesentlich komplexer als ALARO bzw. ALADIN
- Ausfallssicherer Betrieb große Herausforderung
- AROME soll dort ansetzen wo ECMWF, ALARO und LAEF die größten Schwächen aufweisen
- Erstellung des Ausgangszustandes für den Modellrechnung nun erstmals zu 100% „made by ZAMG“ (bietet viele Möglichkeiten / Fehlerquellen ;-)).
- Radarassimilation steht am Anfang (dzt. erste Erfahrungen), bis zur möglichen Operationalisierung noch viel zu tun ☺
- Performance von derzeitiger AROME Version vielversprechend, jedoch laufend Änderungen notwendig (laufende Analyse der Stärken u. Schwächen)
- Erhöhung der vertikalen Auflösung, Vergrößerung der Modelldomain geplant
- AROME bietet viele Möglichkeiten für die Entwicklung neuer Produkte (Hageldiagnostik, Blitzdiagnostik, simulierte Radarreflektivitäten sim. Satellitenkanäle, etc.)

Zusammenfassung und Ausblick II

AROME

25.09.2013

Fahrplan operationeller Betrieb:

Zielzeit	Aktion
demnächst	Bereitstellung von Niederschlagsplots, etc. für ForecasterInnen (=Beginn der Kennenlernphase); „Themancafe AROME“ mit ForecasterInnen; VisWeather?
Sommer	Überführung des AROME Systems in den operationellen User inkl. Ablaufoptimierung, Fallbacks
Sommer/Herbst	Laufende Änderungen im Modellbetrieb (techn., Physik, Assimilationssystem), intensive Evaluierung/Verifikation
Herbst	informelles Treffen mit interessierten ForecasterInnen (Erfahrungsaustausch, Stärken/Schwächen analysieren, Steuerung weitere Entwicklung)
Herbst	Aufbau des Backup-Systems
Winter	Freigabe bzw. operationeller Betrieb der AROME-AUSTRIA
