

Report from stay in Prague
March 9–20, 2026, and March 30–April 10, 2026
New dynamic documentation - wiki page

Nika Kastelec with assistance from Petra Smolíková

June 1, 2026

During my stay in Prague, I worked on new wiki-based documentation for the model dynamics. The aim was to prepare a concise overview for users, including parameter descriptions, equations, and the dynamics settings that are most commonly modified in the namelists. The current documentation covers:

- GFL settings – interpolations and coupling configuration: <https://redmine.umr-cnrm.fr/projects/accord/wiki/GFL>
- Selection of dynamical variables: https://redmine.umr-cnrm.fr/projects/accord/wiki/Choices_of_variables
- Horizontal diffusion – including SLHD: https://redmine.umr-cnrm.fr/projects/accord/wiki/Horizontal_diffusion
- Time discretization: https://redmine.umr-cnrm.fr/projects/accord/wiki/Time_discretization
- Overview of namelists and routines: https://redmine.umr-cnrm.fr/projects/accord/wiki/Namelist_switches

The wiki documentation will be gradually extended with the remaining parts of the dynamics documentation.
